

## Re-Laminated Panels with New HPL and Edge Trim

Raised Access Floor systems have been in use for over 50 years in the US and a large population of these systems are 25+ years old. The challenge with most of these older systems is they utilized 1/8" thick high pressure laminate sheets on the panels and are not typically compatible with the newer panels with 1/16" thick HPL. Pro Access Floors specializes and inventories most older and discontinued replacement panels (solid and airflow) and offers them Re-Laminated, No Matter the Age or Manufacturer. Our Re-Lamination Program offers these past generation panels with New high pressure laminate finish and Edge trim. We offer both 1/16" and 1/8" HPL and the many variations of edge trim used over the years. Pro Access also offers re-lamination for your access floor panels and can provide turn-key solutions for shipping your panels to and from Pro Access for our refurbishment services. Please find listed below the Formica HPL finishes available for the Re-Laminated panels.

### HIGH PRESSURE LAMINATE FINISHES
